

# Maintenance Agreement for the EPS 'BISON' Single House Treatment Unit

Client:

MA051026(3)

Location: .

The EPS Bison Unit requires ongoing maintenance. To ensure the unit operates efficiently there are three important criteria which must be adhered to:

1. Compressor must run constantly and be positioned where it is not subject to flooding/ground water.
2. The unit must be desludged every 1-3 years (depending on the population served)
3. Excessive use of detergents and cleaners must be avoided. (EPS strongly recommend the use of phosphate free detergents and cleaning agents)

In addition to this EPS Ltd., shall visit the plant once yearly (see charges below) to carry out maintenance by checking:

- **Quality of Effluent** – Visual Check
- **Quality of Aeration** – Visual Check
- **Air Compressor**
- **Electrical Connection**
- **Pump** (Where fitted)

The first twenty-four months carries our manufacturers warranty from the date of commissioning and provided that the unit has been checked & desludged accordingly, EPS shall then repair/replace any defective parts. Local Authorities require the customer to hold a maintenance agreement. EPS will undertake to carry out this service for a fee of €130.00 (incl. VAT) yearly (Parts Excluded). Emergency calls will be charged at our standard rates plus materials and mileage

## **Material & Parts Price List: - Available on Request**
